Historical note

The Society for Nematologists was founded in 1961. Its membership consists of those persons interested in basic or applied nematology, which is a branch of zoology dealing with nematode worms. The work of pioneer nematologists, demonstrating the economic importance of nematodes and the collective critical mass of interested nematologists laid the groundwork to form the Society of Nematologists (SON).

SON was formed as an offshoot of the American Phytopathological Society (*APS* - see *MS 175*). Nematologists who favored the formation of a separate organization from *APS* held the view that the interests of SON were not confined to phytonematological problems and in 1958, D.P. Taylor of the University of Minnesota, F.E. Caveness of North Dakota College, A. L. Jenkins of the University of Missouri, and O.H. Elmer from Kansas State College formed a committee of four to promote the formation of an independent society. In December 1959 at the meeting of the American Institute of Biological Sciences (AIBS) at Pennsylvania State University, a committee was appointed to study steps that should be taken for the formation of a new society. The first officers of SON were elected in 1961. The first meeting of SON was held August 26-29, 1962 on the Oregon State University Campus.

The Society of Nematologists is an international organization formed to advance the science of nematology in both its fundamental and economic aspects. To serve this purpose, the Society of Nematologists acts as an agency for the exchange of information, holds regular meetings, and promotes and extends knowledge in all phases of nematology. The Society operates on a nonprofit basis exclusively for the accomplishment of these educational and scientific goals.

The Society of Nematologists is based in Marceline, Missouri, and holds national meetings annually.

Description of series

Series 13 **Associated Organizations** **1959-2005,
undated**

extent: 1.26 linear ft.

description: This series contains material from organizations affiliated or associated with SON. SON tries to encourage members of the society as individuals and as a group to be affiliated to scientific societies whose work is related to the study of nematology either indirectly or directly. The series includes correspondence, agenda and minutes of meetings, and reports from other organizations. The series is organized alphabetically.
